

USER STORIES REPORT - Yohith

1. As a teacher, I want to register one or more students to a specified teacher.

A teacher can register multiple students. A student can also be registered to multiple teachers. Students and teachers specified MUST be existing in the DB - the API should not creating new teacher/student records.

- Endpoint: `POST /api/register`
- Headers: `Content-Type: application/json`
- Success response status: `HTTP 204`
- Request body example:

```
{
  "teacher": "teacherAlice@gmail.com"
  "students":
    [
      "studentBen@gmail.com",
      "studentChloe@gmail.com"
    ]
}
```

Restarting the API

```
curl http://localhost:3000/api/reset
```

```

3. As a teacher, I want to retrieve a list of students who can receive a given notification.

The details of a notification consists of:

- the teacher who is sending the notification, and
- the text of the notification itself.

To receive notifications from e.g. 'teacherBob@gmail.com', a student:

- MUST NOT be suspended, AND
- MUST fulfill *AT LEAST ONE* of the following:
 - i. is registered with 'teacherBob@gmail.com'
 - ii. has been @mentioned in the notification (see example below)

The list of students retrieved MUST NOT contain any duplicates/repetitions.

- Endpoint: `POST /api/retrievefornotifications`
- Headers: `Content-Type: application/json`
- Success response status: HTTP 200
- Request body example 1:

```
{
  "teacher": "teacherBob@gmail.com",
  "notification": "Hello students! @studentDon@gmail.com @studentChloe@gmail.com"
}
```

- Success response body 1:

```
{
  "recipients":
  [
    "studentAlan@gmail.com",
    "studentDon@gmail.com",
    "studentChloe@gmail.com"
  ]
}
```

- Request body example 2:

```
{
  "teacher": "teacherFiona@gmail.com",
  "notification": "Hey everybody"
}
```

- Success response body 2:

```
{
  "recipients":
